DETAILED ACTION

Claims 1-20 are presented within this action

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, drawn to testing a logic circuit within an integrated circuit with test patterns from a test pattern generator (TPG), produces results that are compressed and compared to corresponding expected results, classified in class 714, subclass 726.
- II. Claims 19-20, drawn to a computer implemented apparatus for designing an integrated circuit, classified in class 716, subclass 7.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group I does not require any designing of the integrated circuit. The subcombination has separate utility such as design specifications being met for specific implementation of an integrated circuit being designed for integration within circuitry.

Because these inventions are distinct for the reasons given above and have acquired separate status in the art as shown by their different classification and require

separate searches needed to be performed, a restriction for examination purposes as indicated is proper.

A telephone call was made to the law office of Eckhard H. Kesters on 6/14/06 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
